

The logo for 'Zombie Crypto West' is centered on a dark blue background. The word 'ZOMBIE' is written in a jagged, yellow font with a black outline, where the letter 'O' is replaced by a stylized zombie head with a single yellow eye. 'CRYPTO' is in a similar jagged yellow font. 'WEST' is written below 'CRYPTO' in a purple font with a black outline. The background features a faint, light blue illustration of a cityscape with buildings and trees under a cloudy sky.

INTRODUCTION

1.1 THE STORY BEHIND ZOMBIECRYPTOWEST

ZombieCryptoWest was born out of a desire to create an entertaining way to interact with NFT collectibles, as well as carry out the dream of our child living inside. In particular, to shoot with all the heart from powerful weapons in multitudes of terrible zombies. Meanwhile, we've created a world of collectible and tradable NFT in-game characters, as well as a vast array of weapons. But not just that. The ZombieCryptoWest universe is also a fully interactive ecosystem with many exciting levels in which users can relish their heroes combating zombies and earning rewards along the way.

1.2 MAKING OF THE ZOMBIECRYPTOWEST NFTS

We always wished to appoint people to own their personal digital cowboys and inhabited land. Even if we live in the age of Z, we have chosen marvellous cartoon style for collectible heroes of ZombieCryptoWest. Skins of our heroes were borrowed from iconic westerns with real cowboys, shoot-outs, and chases. You will undoubtedly face unique zombie bosses, for the destruction of which you will receive a reward using different heroes, with their unique abilities. Additionally, you can unlock new heroes by purchasing NFTs. Along with a huge amount of amazing things in our game, you will be absolutely delighted after seeing them.

1.3 USAGE OF ZOMBIECRYPTOWEST NFTS

After a thorough selection of specific images of the characters, we worked them out by hand to the smallest detail. You'll meet a cowboy, a ranger, a prisoner, a saloon owner and a robot. All the levels are so thrilling that it is merely impossible to tear yourself away from the game. We have combined profit with pleasure - you can not just play, but also earn real money. By customizing your gear ,with unique NFT items, you increase the number of coins you earn that can be subsequently spent on purchasing your own land and receiving profit from it.

1.4 THE PLAN FOR ZOMBIECRYPTOWEST

We have big plans for the whole ZombieCryptoWest universe. Raising the topic of the Wild West, we aim to take you to the world of adventure, hope, and accomplishment, where courage, dexterity, and courage are playing a major role. All of these crucial character traits have been and remain relevant at all times. We want to use them outside of time and space.

Here are the plans for the early stages of ZombieCryptoWest::

- Several incredible ZombieCryptoWest NFT(ZCW) levels
- Hero development and the ability to create new, never seen before locations.

DIGITAL GENESIS

In order to achieve all the settled goals of ZombieCryptoWest development, there are several types of sales for each main type of asset that serve to raise funds. This is actually the first step in a roadmap that has been divided into various stages. All of them use the ZCW token, which is simultaneously a BSC token. It is the best asset for liquidity and presales to be used throughout the ecosystem of the following universe. We have separated the digital genesis of ZCW into the following steps:

STEP 1 - SEED AND PRIVATE TOKEN SALE

- During this phase, ZCW tokens will be distributed to the first interested groups. It will help us to prepare the first steps for a successful launch of all ensuing phases.

STEP 2 - PUBLIC SALE

- The following distribution will be done for the community and individuals interested in getting ZCW prematurely.

STEP 3 - GENERATION 0

- We do really want the community, users, and players to be able to own the first piece of ZombieCryptoWest's own universe before the game launches in the ALPHA dimension. These steps are the basis of our project. Players will use the ZCW to purchase a single weapon or an entire weapon package, and that will bring the coins into the ecosystem to use in the following game steps.

STEP 4

- The last phase is the full post-genesis-sale phase during which we will introduce the variety of next generations of ZCW.

STEP 5

- Launching the game

ZOMBIECRYPTOWEST ASSETS

The ZombieCryptoWest ecosystem can be split into smaller functional parts, working together to make full efficiency of the one core ZCW asset. This token represents all utility assets that can be used in the game.

ZOMBIECRYPTOWEST (GAME)

The main part of the ecosystem is precisely the game, which is a whole world of the Wild West, teeming with zombies. It was designed to earn the trust of people all over the world by providing recreation and real-time rewards for playing it. All of this goes hand-in-hand with the collectible aspect of the ZCW. We have a desire to get the community involved as much as it's possible in order to provide functionality for all types of users.

4.1 PLAY TO EARN

You can not only play, but also earn! How? Very easy. By completing daily tasks, quests and killing Bosses, you will receive tokens.

4.2 AIR DROPS

The best players will be rewarded, receiving Air Drops. Become the best in the weekly rating and get a well-deserved reward.

4.3 NFT

Customize your equipment with unique NFT items. As soon as the land is freed from zombies, you can buy it. Open your own NFT saloon and profit from other players in your land.

PROTOCOLS AND SYSTEMS

Another important aspect of the ZombieCryptoWest project and ecosystem is all the systems on the back end. These systems are both decentralized and centralized. Decentralized systems include asset contracts and interaction contracts, while centralized systems are designed for the ZombieCryptoWest API and a store for all existing metadata in our universal.

We can divide them into two groups: Mesa and Meta.

Mesa is a group of functional blocks that operate in the lower layers and handle all the main functions.

Meta, in turn, is the opposite of the previous one, and is the block that sits at the top of the project layer. When a user interacts with a project or part of it, they are mainly interacting with the meta layer, or even more specifically with the ZombieCryptoWest API.

5.1 DECENTRALIZED MESA

The supercore of ZombieCryptoWest consists of data stored on the blockchain, and the main feature of this is to prove ownership.

A secondary, but still vital feature, is the ability to mint and transfer ownership of the respective accounts. Last but not least, blockchain provides an easy way to get information about tokens and coins.

Decentralized assets with their own smart contracts:

- ZCW— Currency

Decentralized interactive contracts (called by the user or via API):

- Marketplace - the contract that manages the market within the game.
- User - a contract called by the game API that mints and creates a new ZCW on the basis of the creation.
- Reward - a contract that is called by both the game API and the user, who works as a mediator between receiving and transferring rewards.

5.2 CENTRALIZED META

The centralized part of ZombieCryptoWest is API part and part of the corresponding database. The primary function of the API is to provide metadata for the complete ecosystem:

- ZCW Metadata

A secondary function of the API is to process player history so that everyone can see that all game events are provable and fair. In addition, it handles other smaller functions that should not be included in the blockchain (Achievements, or storing relationships between assets, persons, and accounts):

- Game logs, history proofs
- Achievements
- In-ZCW relations

COMMUNITY

The community is another important principle of the ZombieCryptoWest project. We will create a space for users, fans and the entire community to participate in the project even outside the ecosystem. We know how significant it is to take care of the players, because our team has experience in creating projects with numerous players. In addition to every piece within the ecosystem, we will establish an option for users and the community to interact with the project at a higher level than just "users". We want the community to be part of the creative front. The game will have room for custom content to be used there as decorations. Otherwise, we are delighted to supply space for tech-savvy people who can create third-party apps and tasks for the game.

VISION

The complete universe of ZombieCryptoWest is a well-planned project created by a team of founders and consultants with extensive experience in the field of game creation. The goal is to provide a unique experience full of fun and exciting moments for all users. We don't want to be just another game. We want to bring new aspects to this crypto world. Our main goal - to make the game as good as it is possible. The Wild West is designed for the widest possible audience. "The Play to Earn" aspect is not only aimed at accidental players. The Community aspect is the building block of all successful projects, so we will work hard on it too.

TEAM

Who are we? We are just a small team of largely experienced professionals. We work hard and with a passion to create high quality games and products. With over 10 years of experience, we have created and published over 20 titles on various platforms such as Web, Android, iOS, and Steam. Our games have been installed over 20 million times on App stores and are played by millions of online gamers. Now we are working on our first game on the NFT blockchain, using all our experience and previous work.
